# Connecting Vegetronix VH-400 Soil moisture Sensor to GreenIQ Smart Garden Hub

## Overview
You can now connect up to 3 Vegetronix soil moisture sensors to your Smart Garden Hub. The sensors allow you to automatically stop watering or even skip a watering cycle when there's enough moisture in the soil. You can also get email alerts when moisture is too low. Let your plants get just the amount of water they need, while taking into consideration the weather conditions as well.

## Wiring

| Vegetronix VH-400 | GreenIQ Smart Garden Hub |
| --- | --- |
| Red | Cable-2, VCC (Red) |
| Bare | Cable-2, GND (Black) |
| Black | Cable-2<br>S-1 (Yellow) or<br>S-2 (Green) or<br>S-2 (Blue) |

## App Setup
1. From the main menu of the web app, go to Sensors > Vegetronix.
2. Turn ON relevant switches.
3. Provide a name to the sensor.
4. Set up minimum and maximum soil moisture level.
5. Press "Save Sensors" button on the bottom of the screen.
